Please enter the amended "Abstract". Ro 2/23/2005

On page 10, please replace the Abstract of Disclosure with the following new paragraph:

## **Abstract of Disclosure**

An operating procedure for the motor (1) of an electric powered tool. The operating idle speed of the motor (1) is set to a value using regulator electronics (4), and the operating speed is the same as a chosen operating speed  $(n_1)$ . The motor (1) runs on a pre-determined and higher idle speed  $(n_2)$  for cooling purposes after a specific idle time (AT  $\Delta T$ ), while the motor (1) runs on the pre-determined operating idle speed  $(n_1)$ . The engine speed is immediately set to the operating speed  $(n_1)$  once again, when the motor requires a moment of strain at a certain period of time (T3) to maintain simple and comfortable operating procedures.
